

Recently added GCC products

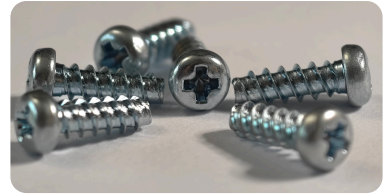

Extended reverse mouse click Z kit

Highly ergonomic Z button option, particularly for people with large hands / long fingers

Ergo LR triggers

With rounded front & back edges and optional extensions that make the trigger reach higher and more inward (shown on the photo)

High quality screws, made in Japan

Replacements for the six tripoint shell screws on Gamecube controllers. Exact same threading angle and diameter as the original, but a more sturdy PH1 drive interface.

Notice of absence

From October 14 to December 6, no orders can be fulfilled as I'll be traveling abroad. If you need parts from me before mid-December, please make sure to submit your order before October 14.

3D-printed products, such as ergo triggers, mouse click Z brackets & kits, slanted ABXY buttons and lossless adapter under-desk mounts could still be fulfilled by me during my absence, but I would ship them from Asia, so to my EU customers, import taxes would apply. If you want to order such products from me during my absence, please contact me by email or through the contact form.

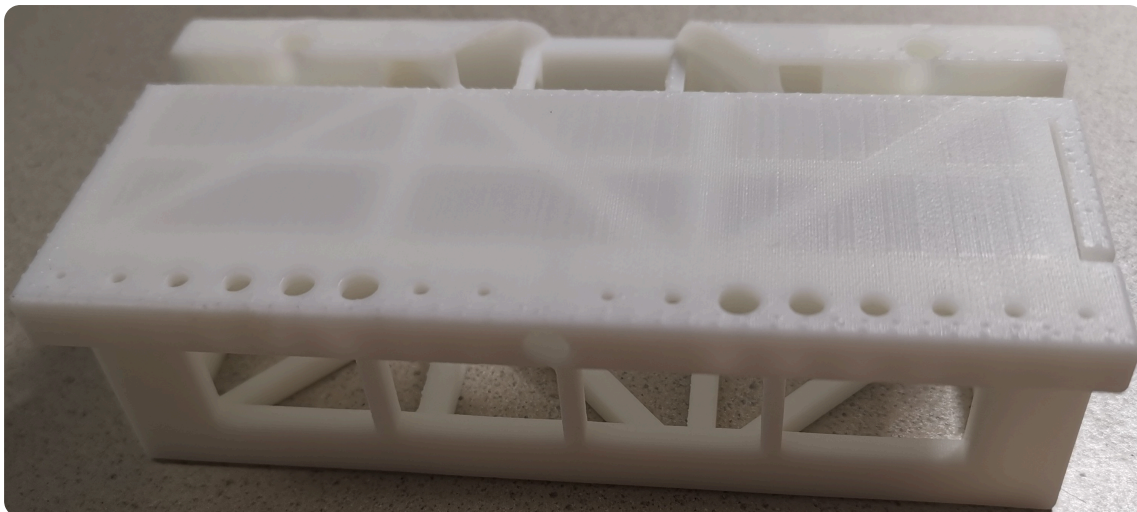

Highlighted products

Dual USB-C / USB-A charging & data cables 3.84-4.2€

Intended mainly for Input Integrity Lossless Adapters: the combo USB-C & USB-A connector on one end makes one

cable work both for laptops / tablets / smartphones on the go and for PCs when at home.
